

Email Preview Portlet

Description

The Email Preview Portlet is a JSR-268 read-only email portlet. This portlet allows a user to connect to an IMAP, POP3, or Exchange Web Services email store and view contents of INBOX and other mail folders.

Features

- Display total message count & unread message count
- Display the contents of your Inbox or any folder on the mail server
- Display messages in a table, with the following information for each message
 - Subject
 - Sender
 - Date Sent
 - Whether the message has been previously viewed
 - Whether the message contains attachments
- Page through your messages & choose page size
- Check for new messages ("Refresh")
- Click on a message to view it's content
- Display customizable Welcome message
- Display customizable Help text
- Provide authentication via cached credential replay or user-specified preferences
- Uses Antisamy to protect against cross-site scripting (XSS)

Administrator Settings

These may be configured by the administrator or omitted. **The following connection settings apply to IMAP/POP integration. Exchange Web Services support is also available.**

- Protocol - IMAP(S) or POP(S)
- Mail Server (host)
- Port
- Inbox Folder Name
- Timeout
- Connection Timeout
- Inbox URL (for click-through into the webmail client)
- Link Service
- Authentication Service (cachePassword and/or portletPreferences)
- Which settings, if any, users may configure (see below)
